

# 3.Settings docs

Describes functions in the app settings

- [Wifi Settings](#)
- [Interface Settings](#)

# Wifi Settings

## WiFi auto-enabling

Turns on wifi every time you log into the app or scan for networks

## Pixie fix

---

Please do not turn off this option if everything is working fine

---

Turns off Wi-Fi before starting a WPS attack, and after the end - turns it on. Some devices should turn this option off if you have an infinite network connection

## Save APs

Saves and shows access points you have already successfully tested

## Change interfaces

You can change interfaces for different attacks

## Change commands

You can change commands to translate and bring interfaces out of monitor mode

# Interface Settings

	<b>Scan Interface</b>	
This interface will be used for wifi discovery and all attacks except handshake and deauth		Wlan0
	<b>Handshake Interface</b>	
This interface will be used for monitor mode and handshake capture attack		Wlan1
	<b>Deauth Interface</b>	
This interface will be used for deauthing users from AP		Wlan1
